The *Tobacco Situation* is published in March, June, September, and December.

SUMMARY

Despite record world cigarette output, reduced U.S. exports are lowering total use of U.S. leaf tobacco for the 1971/72 marketing year from the previous year's level. But leaf use will still exceed the 1971 crop. As a result, carryover of U.S. tobacco will fall about 4 percent from last year's 3.67 billion pounds to the least amount since 1952.

Increasing population and another recovery in the smoking rate raised domestic cigarette consumption (taxable removals, plus estimated inventory changes) for the 10 months ended April 1972 about 4 percent above a year earlier. Cigarette output in the year ending June 30 will likely be up 2 percent from the 585 billion cigarettes produced last year.

In contrast to the cigarette increase, use of cigars and smoking tobacco is down. For the year ending June 30, cigar and cigarillo consumption may fall about 5 percent below the 8.1 billion in 1970/71. Chewing tobacco production may gain. Snuff production may change little.

Unmanufactured tobacco exports made a sizable recovery in January and February, so the July 1971-April 1972 total was only moderately below a year earlier. For the year ending June 30 total shipments are probably down around 5 percent from the 555 million pounds of the previous year. Exports to Japan have gained this season; the United Kingdom and West Germany have taken less.

In July-December 1972, exports should substantially exceed the 219 million pounds of a year earlier, when dock strikes held back shipments. Favorable economic conditions and an increasing demand for tobacco continue in the West European countries that are major customers.

Flue-cured exports were down a tenth in July 1971-April 1972, principally due to smaller shipments to the United Kingdom and EC countries. For the year ending June 30, about 365 million pounds (480 million, farm-sales weight) will be exported, 10 percent below 1970/71. Burley exports for the crop year ending September 30 should exceed both last year's level and the 1969/70 high of 48 million pounds (58 million, farm-sales weight).

Cigarette tobacco imports for consumption during July 1971-April 1972 rose 20 percent from a year earlier. Imports of cigar leaf were up 10 percent. U.S. manufacturer's stocks of imported cigarette tobacco on

April 1 were 2 percent below a year earlier and the smallest for that date since 1966. U.S. stocks of foreign-grown cigar tobacco on April 1 were down 17 percent. Last year's dock strike limited arrivals.

Despite cigarette output gains, domestic flue-cured use in the year ending June 30, is slipping 1-2 percent below last season's 27-year low. Allowing for lower exports, total disappearance for the crop will drop about 5 percent below the 1.17 billion pounds of last season. Disappearance will exceed the 1971 crop so the July 1972 carryover of flue-cured will likely fall about 2 percent below the 1.98 million pounds of a year earlier.

To receive price support on tobacco, growers must certify again this season that they did not use DDT or TDE pesticides on their crop. Analyses of the 1971 crop indicated some growers sold tobacco containing these pesticides. Accordingly, USDA has announced that the 1972 crop will be random sampled on all markets and samples will be chemically analyzed for residues. The law provides penalties for false certification.

Based on March 1 intentions, this year's flue-cured crop is projected 3 percent smaller than last year. For the new season, total supply—estimated carryover plus the projected 1972 crop—may be down about 2 percent. Auctions for the crop usually begin in the second half of July on type 14 (Ga.-Fla.) and type 13 (S.C.-N.C.) markets.

Disappearance of burley tobacco may total 3 percent above last season's 557 million pounds. This would leave an October 1 carryover about 8 percent below last year's 1,346 million pounds. The farm poundage quota, reflecting 1971's underquota marketings, is expected to result in a larger 1972 crop offsetting the smaller carryover, making supplies about equal to last season.

Auction markets for the 1971 crop of Maryland tobacco began April 18 and are scheduled to end June 23. Through June 15, prices averaged 82 cents per pound compared with 79 cents a year earlier. Quality of offerings declined, but prices for almost all grades increased. Although the 1972 Maryland tobacco crop may approximate 1971's, a smaller carryover will result in another reduction in supply next season.

Disappearance of cigar binder, wrapper, and dark air-cured tobaccos in the current marketing year may gain a little from last season. Use of fire-cured and domestic cigar filler tobaccos is declining. Nevertheless, estimated usage for most of these types of tobacco will exceed last year's crop, leaving less carryover into 1972/73. Tentative 1972/73 supplies—estimated carryover plus prospective production—are lower than the previous season for dark air-cured, cigar filler, and wrapper, but about the same for fire-cured and binder tobaccos.

TOBACCO PRODUCTS

Cigarette Use Up

With increases in the adult population and rising consumer incomes, U.S. smokers puffed 4 percent more cigarettes during the 10 months through April 1972 than the same period in 1970/71. The gain was maintained in January-April. Per capita use accounted for a part of the increase since adult population is increasing about 1½ percent annually. Gains in cigarette use are expected to continue in July-December 1972.

Use by U.S. smokers (including those overseas) in the year ending June 30, 1972, may have increased 4 percent to about 566 billion cigarettes. Domestic consumption accounted for the gain as shipments to overseas forces stayed at last year's low level. Consumption includes withdrawals of an estimated 8 billion from inventory following a buildup in 1970/71 (table 2).

Total U.S. cigarette output in 1971/72 is estimated at 595 billion—about 2 percent above last year's record. This includes about 34 billion cigarettes for export, and 2 billion for Puerto Rico and other U.S. possessions. During the 10 months through April 1972, exports rose one-fifth, reflecting the continuing upward trend in world cigarette consumption (table 1).

Retail prices have moved higher in the past 12 months, in part due to higher taxes. Wholesale prices haven't changed much. Since last July, 11 States

increased cigarette tax rates, compared with 13 States in 1970/71 and 16 States and the District of Columbia in 1969/70.

1/Total removals (or sales) from U.S. factories plus those from Puerto Rico, and imports, minus exports. 2/Subject to revision. 3/Estimated. 4/After December 1965, taxable removals data replaced by domestic sales, and tax-exempt removals data replaced by export sales.

Compiled from reports of the IRS, Bureau of the Census, and AMS, USDA.

April 1972, 6 percent less than a year earlier. For the 1972 fiscal year, consumption may be down 5 percent from 1970/71 and well below the 1964/65 record. Demand has been weaker, in part reflecting the stronger cigarette demand. In 1971/72 U.S. smokers used more cigars from Puerto Rico but fewer from U.S. factories (table 3).

According to the annual survey by the Cigar Manufacturers' Association of America, sales of cigarillo-size cigars (weighing over 3 pounds but not over 10 pounds per 1,000) totaled 3 billion in calendar 1971. Traditional-size cigars generally weigh more than twice as much as the average cigarillo. Cigarillo sales (based on taxable removals) in 1971 were 38.4 percent of total sales of large cigars and cigarillos. This compares with 36.2 percent for 1970, and 13½ percent at the start of the 1960's.

Smoking and Chewing Tobacco

Smoking tobacco production, for pipes and roll-your-own cigarettes has dropped. At the same time, cigarette sales have risen. In the first 9 months of 1971/72 smoking tobacco output fell 17 percent to 43.2 million pounds. Domestic sales, including imports, dropped 8 percent to 51.5 million pounds. U.S. manufacturers' sales dropped sharply; imports rose. Declines occurred in both pipe tobacco and cigarette cut (roll-your-own) sales. U.S. smoking tobacco consumption for the year ending June 30 may be down about 7 percent.

Smoking tobacco exports in bulk during July 1971-April 1972 were 4 million pounds larger than a year earlier. Continuing an upward trend of several years, exports probably will total one-sixth above the 29 million pounds of 1970/71 (table 4). Switzerland and the Netherlands are the leading destinations. Bulk exports consist mostly of blended and specially prepared cigarette leaf. These exports have gained due to the growing overseas popularity of American cigarette brands and American-type blended cigarettes. These cigarettes are manufactured in overseas factories of American-based companies and by foreign firms under license.

Chewing tobacco output in 1971/72 is estimated about 2 percent above the previous year; gains in loose leaf production more than offset a decline in plug chewing (table 4).

Snuff production in 1971/72 remained about the same as in 1970/71. Output appears to have stabilized following a long downtrend.

U.S. EXPORTS AND IMPORTS

Leaf Exports Lower

For the year ending June 1972, exports of unmanufactured tobacco are estimated 4 percent below

Table 4.—Tobacco products: Output, 1970-72

Item	Year ending June 30—		
	1970	1971 ¹	1972 ²
	Million pounds	Million pounds	Million pounds

¹ Subject to revision. ² Estimated. Basic data compiled from reports of Internal Revenue Service and Consumer and Marketing Service, USDA.

the above-average volume of 555 million pounds exported last fiscal year. Combined movement of tobacco under barter, short-term credit, and Public Law 480 may equal last year's 239 million pounds.

During July 1971-April 1972, shipments fell 4 percent to 448 million pounds of unmanufactured tobacco (export weight). The average unit value of exports increased 5 percent.

January-April exports of 229 million pounds were substantially above the 168 million pounds in the same months of 1971 as Japan's season shipments were bunched together in early 1972. Both the United Kingdom and West Germany, the leading destinations, reduced takings (table 5). Delayed shipments due to the October-November dock tie-up contributed to the high level in early 1972. But exports in May and June probably fell below the volume shipped during those months of 1971.

^{1/} Preliminary.

^{2/} Canada, Greece, Cyprus, Lebanon, India, Korea.

^{3/} 1972 imports included shipments from Canada and Mexico for processing into tobacco sheet. Detail may not add to total due to rounding.

Compiled from publications and records of the Bureau of the Census.

Decreased exports of flue-cured tobacco, the principal export class, accounted for most of the July-April decrease. Shipments of burley, fire-cured, Maryland, and cigar wrapper were up. Much of the July-April decrease occurred in exports to the United Kingdom, where manufacturers anticipated low-cost tobacco from Rhodesia (formerly a major U.K. supplier) or associated members of the European Community. Most other European countries took less, but larger shipments went to Japan, Italy, Denmark, and South Vietnam.

Economic prospects for Europe and other U.S. markets continue favorable but the enlarged EC and the development of its tobacco CAP have hurt our long-range export prospects. Assuming that the U.N. sanctions continue moderately effective against Rhodesia's sizable tobacco stocks, U.S. exports in July-December 1972 may equal the 1966-71 average of 311 million pounds for those months.

Imports Continue to Pick Up

U.S. tobacco imports for consumption (factory use of imports) during January-April 1972 were about 12 percent higher than the high level of a year earlier (table 6). Cigarette tobacco imports gained 10 percent to accommodate the gain in cigarette output. Turkey

remains our leading supplier. Cigar tobacco imports also increased.

January-April 1972 arrivals of tobacco (general imports) totaled 133 million pounds, 47 million more than in January-April 1971. With last year's dock strike ending, the shipping pace for cigarette tobaccos picked up. So stocks got a sizable boost from the January low. Still, by April 1 this year, stocks of foreign-grown cigarette and smoking tobacco in the United States were 2 percent below a year earlier. The total of 377 million pounds (farm-sales weight) was smallest for that date since 1966.

TOBACCO LEAF SITUATION AND OUTLOOK¹

Pesticide Residue Developments

USDA announced on May 15 a policy of spot checking tobacco for pesticide residues. USDA will random sample the 1972 tobacco crop on all markets and will chemically analyze the samples for DDT and TDE residues. To receive price support, growers must certify again this season that they did not use DDT or TDE pesticides. The law provides penalties for false certification.

During the past 2 years practically all producers certified they did not use DDT or TDE on tobacco after it was set. Pesticide residues fell substantially. But analyses of the 1971 crop found residue in some samples.

Even in very small amounts, pesticide residues are a major threat to the market acceptability of U.S. tobacco, especially that intended for export. West Germany has set near-zero tolerances for DDT and TDE residues in food and tobacco products effective next January 1. This may also become applicable to the entire European Community, including Great Britain, Denmark, Norway, and Ireland when they become full-fledged Common Market members.

1972 Crop Prospects

A cool, wet spring slowed plant bed development and field work over most of the burley belt, but by mid-June setting was near normal. Flue-cured conditions were near ideal in Georgia and Florida. After the first week of June, warm weather cleared tobacco bluemold out of most North Carolina areas. By mid-June tobacco setting was completed in North Carolina and Virginia. Shade-grown tobacco harvest in Georgia and Florida was progressing normally and flue-cured harvest was starting.

Auctions for the 1972 flue-cured crop are expected to begin the second half of July, after the industrywide Flue-cured Tobacco Marketing Committee works out marketing schedules. Opening dates depend somewhat on the maturity of the crop. Last year auctions for both type 14 (Ga.-Fla.) and type 13 (S.C.-N.C.) opened August 3, the latest opening date in 30 years.

Development of the new crop will be an important influence on prices received by farmers when the 1972

¹All quantities in this section are stated in farm-sales weight equivalent unless otherwise noted.

auction season opens. With a smaller flue-cured crop this season than last, domestic manufacturers and exporters may buy at auction close to 95 percent of the crop just as they bought last year. Prices are expected to average a little above last year's, due to the 5 percent higher support level (table 7).

On July 12, USDA's Crop Reporting Board will release its first forecast for 1972 flue-cured tobacco production, together with the acreage for harvest and the indicated yield. Subsequent monthly reports, beginning August 10, will also cover burley and other kinds.

Flue-cured

Trade Stocks Pick Up

April 1 stocks of flue-cured tobacco (types 11-14) reported by the Agricultural Marketing Service totaled 2,158 million pounds, 3 percent less than a year earlier. CCC loan stocks fell one-fifth to 646 million pounds, but privately held stocks (manufacturers and dealers) increased 6 percent; this contrasted with a downtrend during 1965-71 (table 8).

Total disappearance during July 1971-March 1972 was 894 million pounds, 22 million lower than in the same period of 1970/71. Domestic disappearance was off 1 percent to 493 million pounds, and exports were down 4 percent. Cigarette production held its own so manufacturers are apparently still reducing the flue-cured proportion in cigarettes.

Exports Rally

Following last year's dock strike and with the threat of a tieup in March, flue-cured exports surged ahead in January and February making up part of an earlier deficit. March and April shipments fell back sharply. For the 10 months through April, U.S. flue-cured exports totaled 417 million pounds, still down 10 percent.

The United Kingdom reduced takings to 94 million pounds in July-April, but remains the leading destination for U.S. flue-cured tobacco. This volume was one-fourth below a year earlier. U.K. cigarette sales have not entirely recovered from the publicity surrounding last year's smoking and health report. Also, manufacturers continue to take a larger share of lower-cost imports from other sources to offset rising U.S. prices and in anticipation of eventual harmonization of tobacco taxes throughout the European Community (table 10).

West Germany is taking substantially less U.S. tobacco. In September a sizable boost in West Germany's cigarette tax goes into effect. Japan, our third ranking market, has taken considerably more U.S. tobacco this marketing year. Japan's cigarette sales are going up about 5 percent annually.

Disappearance Down

Disappearance of flue-cured tobacco in the 1971/72 marketing year ending June 30 is about 4 percent below the 1,174 million pounds used in 1970/71 (table 9) and 7 percent below the 1965-69 marketing year average.

Domestic use probably totals 2 percent below last year and the lowest since 1943/44. Exports may be 10 percent lower. These prospects bring total disappearance down to 1,110 million pounds, still in excess of the last season's marketings. Carryover drops to 1,943 million pounds, down 2 percent from a year earlier and one-fourth below the 1965 record.

As of June 30, flue-cured loan stocks are sharply below last year. During July 1971-May 1972, about 217 million pounds were sold, double a year earlier, and the largest volume since 1966/67. Unsold government loan stocks on May 31, 1972, totaled 584 million pounds, compared with 748 million a year earlier. The record was 960 million pounds on January 1, 1965.

1972 Flue-cured Acreage Declines

Despite record prices for last year's flue-cured crop, growers are expected to set about 1 percent less acreage in 1972. This indicates harvested acreage will again fall short of allotted acreage. In North Carolina, the principal production area, daily farm wages this spring averaged 7 percent over 1971 and the farm work force was down 2 percent.

The 1972 effective flue-cured acreage allotment, reflecting last year's net overmarketings, is about 576,000 acres, and the effective poundage allotment is about 1,061 million pounds, down 1 percent from last year. In 1971, growers leased 27 percent of the poundage quota from other allotment owners; the proportion is expected to increase further this year.

If farmers carry out their March 1 intentions, they will harvest about 520,000 acres this year. Assuming a normal growing season and yields, modified by the acreage-poundage program, the crop computes out to about 1.04 billion pounds. Production at this level, plus the prospective carryover, would give a total 1972/73 supply 3 percent below the 3.05 billion pounds in 1971/72.

1972 Price Support Details

USDA announced on June 2 the 1972 loan rates for the various grades. Rates range from 47 cents to 98 cents a pound for untied leaf, reflecting the national average support level of 72.7 cents a pound. This is about 4.8 percent above 1971. Grade price supports increased 2 to 7 cents per pound over 1971 levels. Of the 155 grades, 50 were increased 2 cents per pound, 29 went up 3 cents, and 30 went up 4 cents. The largest increases were on nondescript and lower-value leaf grades, which in recent markets sold for prices well above the loan rate. For the first time price supports on tied tobacco will be the same as for untied tobacco of like grade.

As in the past, no price support will be offered in 1972 on any tobacco graded N2 (Nondescript 2) No-G (No Grade) U (Unsound) W (Doubtful keeping order) or scrap. Marketing of such tobacco, however, will be charged against individual farm quotas to discourage the marketing of these grades.

Public Law 92-311, approved June 6, authorizes the lease and transfer of flue-cured tobacco marketing quotas between farms within the same county during the marketing season. However, any lease from a farm with a quota in excess of 2,000 pounds filed on or after June 15 is not effective unless both the lessor and lessee planted at least 50 percent of their respective farm acreage allotment. This law gives flue-cured tobacco farmers more flexibility in their farming operations, especially when favorable weather conditions bring production in excess of their quotas. Previous legislation set normal planting time as the deadline for each season's leasing activity.

Burley

First Half Use Rose

Both exports and domestic use of burley increased in the first half of the marketing year (October-March). At 284 million pounds, disappearance was 9 million pounds above a year earlier. Domestic use totaled 259 million pounds, up 4 million. At the same time, cigarette output edged upward.

For the first 7 months of this marketing year, burley exports totaled 26 million pounds—4 million above a year earlier. Italy and Japan accounted for most of the gain. West Germany, the leading destination, took less. Burley exports averaged \$1.01 per pound this past July-April, compared with 94.5 cents in 1970/71 (unstemmed leaf basis).

Carryover Declining

April 1 stocks of burley totaled 1,534 million pounds, 6 percent below a year earlier. By May 31, government loan stocks were about 30 percent smaller than the 482 million pounds of a year earlier. A smaller crop available this season for manufacturers, exporters, and dealers gave loan associations an opportunity to sell substantially more old-crop tobacco. With the rise in cigarette production, domestic utilization of burley tobacco this season may exceed the 503 million pounds in 1970/71. Exports may exceed both last year's level and the previous record of 58 million pounds in 1969/70. Based on these prospects, disappearance would climb 3 percent above the 557 million pounds of last season. This would leave an October 1 carryover about 8 percent below a year earlier.

March intentions indicated farmers would set about 6 percent more burley acreage than last year. Assuming an average yield, production on the intended acreage would total 569 million pounds, about one-fifth more than last

year's weather-reduced crop. Indicated carryover plus the projected crop would result in a 1972/73 supply about the same as this year's 1.82 billion pounds.

Since the projected crop is considerably below the quota of 612 million pounds, burley growers may have altered their plans and may market a crop about equal to the quota. For example, flue-cured growers have sold under an acreage-poundage program for 7 years, with overquota and underquota marketings about equal.

Last year 18,874 burley allotment holders leased out 15.3 million pounds. Leasing was first authorized by last year's burley legislation. Growers can lease throughout the production and marketing season, but most of the 1971 leasing occurred during the marketing season.

Maryland

Brisk Demand Boosts Prices

A strong demand prevailed for Maryland tobacco (type 32) again this season and auction prices attained another record high. Quality of offerings eased downward from last year but almost all grade prices were higher. The 1971 crop was about 1 percent larger than the previous year's outturn. Auction sales began April 18 and were scheduled to end June 23. Through June 16 this year market receipts totaled about 88 percent of the estimated 1971 crop. Comparative data for the same period in 1971 are:

Maryland auction sales

Year	Net sales	Average price
	Million pounds	Cents/pounds
1971	26.3	78.9
1972	26.3	82.1

Maryland tobacco goes almost entirely into cigarettes. Beginning with the 1966 crop when growers did not approve marketing quotas, Maryland tobacco has not been eligible for government price support. Since 1966, Maryland supplies have dropped about 40 percent. Disappearance during the first half of the marketing year (October 1971-March 1972) was 12 million pounds—about 8 million below a year earlier. Almost all the decline occurred domestically, as U.S. manufacturers adjusted disappearance rate to declining supplies.

In the first 7 months of the current marketing year exports were 1 million pounds below the low level of a year earlier and averaged about 2½ million pounds below the same period in the 3 previous years. Last fall's dock strike came at the beginning of the marketing year. Switzerland, the principal export outlet, accounted for most of the decline. Maryland tobacco accounted for about 8 percent of total Swiss tobacco imports in 1971.

Carryover to Decline Again

For the 1971/72 season ending in September, disappearance of Maryland tobacco is expected to fall

substantially short of last season's 40 million pounds (table 11). Both domestic use and exports are declining as supplies have fallen and prices risen. Carryover next January 1 may decline 3 million pounds from this year because disappearance exceeds production.

Based on farmers' March acreage intentions and average yield, the 1972 Maryland crop would decline about 2 percent below the 1971 crop. The 1972/73 supply would be about 5 percent below the 76 million pounds for this season and the lowest since 1945/46.

Fire-cured

Disappearance May Drop

Disappearance of fire-cured tobacco (types 21-23) during the first half of the marketing year that began October 1, 1971, was 23 million pounds—about the same as a year earlier. Domestic use gained, while exports slipped. For the year, 4 percent less disappearance is expected. Still it would exceed last year's output by about 3 million pounds. Carryover stocks this October would fall about 5 percent from last October's (table 12).

Due to the record-high average price in the 1971/72 markets, fire-cured growers may expand acreage again this year. An increase is expected in the Kentucky-Tennessee area, according to March 1 planting intentions. On intended acreage with an average yield adjusted for trend, growers would produce a crop of about 47 million pounds, nearly 8 percent larger than in 1971, and about one-seventh above the 1966-70 average. The 1972/73 supply is indicated about the same as this season.

Based on the past decade's trends, domestic use of the Virginia type may not change much this season from 1970/71. But domestic use of the much larger-volume Kentucky-Tennessee types may increase, partly recovering a sizable decline last season.

Exports of fire-cured tobacco in 1971/72 may decline from last season due to the dock strike at the start of this crop year. Exports of 10.6 million pounds for types 22-23 during October 1971-April 1972 were 2 million below a year earlier. The Netherlands—usually the leading outlet—decreased its takings 2 million pounds, and the shortfall may widen further in succeeding months. Exports to France, the second-ranked outlet, already exceed last season's total.

Virginia fire-cured exports of 1.6 million pounds in October 1971-April 1972 were 0.8 million below a year earlier. Exports to Norway, the leading destination, were down. In Malawi, another major fire-cured exporter, the 1972 crop is expected to reach 28.5 million pounds, up from 26.2 million last year.

Dark Air-cured

Supplies Declining

Total disappearance of dark air-cured tobacco (types 35-37) during the first half of the current marketing year

^{1/} Based on March 1 prospective plantings and average yield with allowance for trend and estimated stocks. ^{2/} Includes 4.7 million pounds fire loss, April 1969. ^{3/} Less than 50,000 pounds. * Estimated.

was 11.4 million pounds, 0.9 million above a year earlier. Domestic disappearance gained after a big drop last year. For the year ending September 30, 1972, total disappearance may rise slightly. Disappearance is expected to exceed last year's production, reducing carryover again (table 13).

About the same acreage and production as in 1971 are projected for this season. But with carryin stocks likely lower, the 1972/73 supply would total slightly below the 70 million pounds in 1971/72.

Domestic disappearance of dark air-cured tobacco follows a cyclical pattern, so in the year ending in September disappearance may rise from the low level of last year. In the first half of the current marketing year, there was less manufacture of plug, twist and fine-cut chewing tobacco—major domestic outlets for these types. Exports of dark air- and sun-cured tobacco, which normally account for one-fifth of use, are declining in the 1971/72 crop year.

Exports of Black Fat tobacco, a semiprocessed product of mostly dark fire-cured and air-cured leaf, increased in October 1971-April 1972 from the year-earlier level of 1.6 million pounds. Exports of One Sucker and Green River leaf were down 500,000 pounds.

Cigar Tobacco

1972 Prospects

Supplies of domestic-grown cigar tobacco are smaller again this year, due to lower carryover stocks. Production is expected to be about the same in 1972/73 as last season. The decline in cigar production has stopped the uptrend in imports.

By April 1, holdings of U.S. and Puerto Rican cigar tobacco (types 41-62) totaled 189 million pounds, a decline of 24 million from a year earlier. The decrease was in the filler and wrapper types; binder types were up slightly. Foreign-grown cigar tobacco stocks in the

United States on April 1 were 17 million pounds below a year earlier. Stocks from nearly all origins, including the Philippines, declined.

During October 1971-April 1972, manufacturers used about 52 million pounds of imported cigar tobacco—slightly below a year earlier. Less came from the Philippines, the leading supplier.

U.S. cigar tobacco acreage may gain a little in 1972, reversing the long downtrend. The increase would occur in cigar filler and binder types. Wrapper acreage may be unchanged. Again this year, USDA transferred filler and binder allotments (types 42-44 and 53-55) to growers who wanted to increase their 1972 plantings. Under terms of this annual reallocation USDA transferred the allotments from growers who did not wish to use their allotments this year. The reallocation consisted of 1,464 acres in Wisconsin and 1,024 acres in Ohio.

Filler Supply Lower, Disappearance Steady

For the first half of the current marketing year (October-March) disappearance of cigar filler tobacco was 31 million pounds—2½ million above a year earlier. Ohio and Puerto Rican filler use dropped, but Pennsylvania filler rose. During October 1971-April 1972, filler—export a relatively small part of total disappearance—increased to 266,000 pounds, compared with 55,000 pounds of a year earlier. France accounted for the gain.

Based on historical trends and 1971/72 part-year data, total disappearance of Pennsylvania filler may not change much from 1970/71. Disappearance of Puerto Rican tobacco may decline further in 1971/72. Since filler disappearance is expected to surpass production by about 19 million pounds, carryover on October 1 may total around 91 million pounds, lowest on record (table 14).

* Estimated, 1972 production based on March 1 acreage intentions and projected yields.

Binder Disappearance Gains

With loose leaf chewing tobacco output advancing, cigar binder disappearance for October 1971-March 1972 advanced 4 million pounds to 12½ million. Wisconsin binder (types 54-55) increased, while Connecticut Valley (types 51-52) declined. Rising price levels virtually preclude exports of either kind.

Disappearance of Connecticut Valley binder tobacco for 1971/72 is estimated below last season's output, so carryover this October 1 may rise to 7.7 million pounds—½ million pounds above the year-earlier level.

Gains in looseleaf chewing tobacco production and manufacturers' preference for Wisconsin tobacco point to use 5 million pounds above last season's 16.5 million. But carryover stocks may still rise slightly above last October's 37 million pounds.

More Wrapper Shipped

Disappearance of shade-grown wrapper (types 61-62) during July 1971-March 1972 was 12.7 million pounds, 2.6 million above a year-earlier. Most of the gain came in exports as domestic use held close to last year's level. Prices to growers held about steady again last season. For the year ending June 30, 1972, cigar wrapper

disappearance is expected to exceed the 1971 crop, leaving smaller carryover than a year ago. During the first 10 months of the marketing year, cigar wrapper exports were 2.8 million pounds, 1.5 million above a year earlier. They were boosted by the largest shipments of Connecticut Valley type to the United Kingdom in several years.

1971 Crop Summary

Marketing of the 1971 U.S. cigar tobacco crop was practically completed by April 1972. According to USDA's Crop Reporting Board, the crop totaled 68.4 million pounds, about 4 percent below 1970. Price changes ranged from 8 cents per pound less for Georgia-Florida shade-grown wrapper to 5 cents per pound more for Pennsylvania filler and Southern Wisconsin binder. Last year filler and wrapper acreage and production were below 1970; binder acreage and output gained. Wisconsin binder yields reached a record high last year; they stabilized for cigar wrapper types, but declined for filler types.

The Puerto Rican crop (type 46) was harvested early this year. Acreage was reduced, so production fell to a record low.

WORLD TOBACCO TRADE REVIEW, 1971²

Exports Up in 1971

Free world tobacco leaf exports rose 3 percent last year to surpass the 1964 record. Although U.N. sanctions against Rhodesian tobacco continued, increased quantities are apparently moving in world trade. Oriental leaf continued in surplus. Imports of free-world countries increased 8 percent from 1970 to 2,003 million pounds of unmanufactured tobacco. Trade data is not available from Sino-Soviet countries. Because the People's Republic of China ships a sizable quantity of tobacco into Europe and the Far East, free-world imports are larger than exports.

The United States, the world's leading producer and exporter of tobacco, supplied 25 percent of the free-world exports in 1971 compared with 28 percent in 1970 (table 15). U.S. exports during 1971 decreased 7 percent due to the U.S. dock strike and stiffer competition from cheaper tobacco. Last year the United States shipped about 43 percent of the free-world's flue-cured total.

The 10 leading exporting countries accounted for 74 percent of total free-world exports last year, about the same as in 1970 (table 17). In 1955-59 this share averaged 87 percent. Many other countries are attempting to expand tobacco production as a source of valuable export earnings, although their exports sell for one-fourth or one-half of U.S. prices. Among 9 specified countries (Mexico, Argentina, Paraguay, Colombia, South Africa, Taiwan, South Korea, Pakistan, and Thailand) tobacco exports remained the same as the 229 million pounds in 1970. But the total was well above the 100 million pounds in 1960-64.

Import Highlights

Last year the United States ranked third as an importer of cigarette and cigar tobaccos, mainly for

blending with domestic types. West Germany surpassed the United Kingdom to again become the world's leading tobacco importing country. West Germany took more tobacco last year as the industry boomed. But U.K. manufacturers further reduced U.S. tobacco inventories while Parliament considered changes in import policy.

The 12 leading importing countries, excluding the United States, accounted for 68 percent of total free-world imports in 1971 (table 16). Including U.S. imports, the 13 countries accounted for 79 percent. This was a little larger proportion than in 1970.

Last year the United Kingdom imported 269 million pounds of tobacco, 5 percent below 1970. Lower receipts from the United States accounted for almost all the decline; Commonwealth receipts picked up. Gross clearances of tobacco from bond in 1971—an approximate measure of home use and exports combined—fell 5 percent.

West Germany's imports jumped to 341 million pounds, one-fourth above 1970. The United States remained the leading supplier, and increased its share. West German cigarette production set a record high

again last year and manufacturers rebuilt inventories. Germany's imports of tobacco from Italy, Turkey, and Poland rose, while imports from Greece declined. Mainland China's imports are no longer reported separately, but from the change in "other countries" category, China apparently supplied about 24 million pounds last year, up 3 million from 1970.

France is the fourth largest tobacco importer, but our share of the market is minor. Latin American sources supplied about 37 percent of the total last year, a little larger percentage than in 1970. Oriental leaf accounted for 27 percent of France's tobacco imports last year, about the same share as in 1970. France began taking tobacco from Italy with the incentive of the EC tobacco CAP.

The Netherlands has no domestic tobacco production and draws from a large number of countries. The U.S. share of the total declined last year, while consignments from South Africa and Mozambique rose to 24 percent.

With rising cigarette production and falling domestic tobacco production, Japan imported a record 100 million pounds of tobacco last year. The United States, the principal supplier, nevertheless saw its share drop again. Last year for the first time Japan took tobacco from Mexico. This year small shipments are coming from Mainland China (table 18 and 19).

FOREIGN NEWS BRIEFS

Foreign Production and Sales

Canada's 1971 flue-cured crop was about 212 million pounds or about the same as the previous year. Auction sales in Ontario (where most of the crop is grown) amounted to 202 million pounds and prices averaged the equivalent of 64 U.S. cents per pound. With a record-high yield, production exceeded the target by 13 percent. Prices averaged about the same as a year earlier, but below the Marketing Board's target price.

For 1972, Canadian manufacturers agreed on a target price of 66.5 Canadian cents per pound if the Ontario crop is less than 210 million pounds. Ontario's acreage quota was increased 7 percent. Frost on June 11 occurred in about one-half the production area. Information has not been received on extent of damage or availability of replacement plants.

In the United Kingdom, a government commission reported in May that a settlement of the

U.K.—Rhodesian political differences was not possible. Britain is continuing its Rhodesian trade embargo, which began when Rhodesia declared its independence in 1965. Some countries trade directly or indirectly with Rhodesia, despite U.N. sanctions. The United States is now allowing American firms to purchase Rhodesian chrome and other minerals.

For Rhodesia's flue-cured crop, harvested early in 1972, growers received a guarantee equivalent to 32 U.S. cents per pound. Auction sales were delayed pending a possible settlement of the U.K.-Rhodesia political dispute. But when no settlement was forthcoming Rhodesia's government went ahead with sales again in

secrecy. Growers may have increased their crop over the target of 132 million pounds.

Oriental leaf production increased 1 percent last year. Turkish growers maintained output, although crop quality was down. Sales of the 1971 crop began in January and the Turkish Monopoly paid higher prices than last year. The Monopoly continues concessional sales to reduce old-crop stocks.

In late March, the European Community established 1972 season prices averaging 5 percent higher than the previous year. Increases ranged from 2 percent for Italian burley leaf to 8 percent for Italian flue-cured. This season's rise follows a 6 percent rise last year.
